

QUINN YOCKEY

qyockey@tutanota.de | (541) 625-9622 | [linkedin.com/in/quinnnyockey](https://www.linkedin.com/in/quinnnyockey)

EDUCATION

Honors BS in Electrical Computer Engineering, Minor in Computer Science
Oregon State University

Expected June 2027
Corvallis, OR

- 3.97 GPA
 - Presidential Scholar
 - Honor Roll & Engineering Dean's List Fall 2023 – Present
-

PROFESSIONAL EXPERIENCE

Electrical Engineer Intern
OPeN Lab

Jan. 2026 – Present
Corvallis, OR

- Assemble and troubleshoot electrical stack for IoT air quality sensors.
- Lead weekly lab trainings teaching integration of sensors into embedded C++ codebase.
- Presented project details at open house event to researchers and investors.

Embedded Software Engineer Intern
Wind River

Jun. – Sep. 2025
San Diego, CA

- Developed python tool to collect data on internal project status using SOAP API from tracking database.
- Automated progress data collection into spreadsheets, saving hours per week for project managers of multi-million-dollar commissions.
- Reversed-engineered existing internal API library to extend functionality and apply bug fixes.

Embedded Software & Electrical Technician Intern
Lime Rock, LLC

Jul. - Sep. 2024
Medford, OR

- Designed serial communication interface in embedded C for STM32 microcontroller, enabling seamless and abstract integration with measurement sensor.
 - Utilized oscilloscope for extensive debugging of hardware and software.
 - Applied quaternion mathematics to implement precise stabilization feedback, mitigating gimbal lock risk.
 - Increased manufacturing efficiency of military-spec wiring harnesses & soldered circuit board assemblies.
 - Collaborated with engineers to write and refine documentation throughout prototype development.
-

PROJECTS

Oscilloscope

Jan. – Mar. 2026

- Designed and constructed 2-channel digital oscilloscope, collaborating with team of 3 students.
- Developed embedded software in C to interface with ADC at fast 200 kHz resolution.
- Integrated project schematics into PCB layout, accounting for transmission line characteristics of traces.

Bicycle Speedometer

Oct. 2024 – Jan. 2025

- Designed and implemented bike speedometer for ATmega32U4 microcontroller.
 - Iterated over software architecture using embedded C, ultimately reaching interrupt-driven control flow.
 - Optimized design for low power consumption to maximize device battery life.
 - Developed error-resistant drivers for serial transmission and OLED display.
-

SKILLS

Languages: C, SystemVerilog, Assembly (AVR & 6502), C++, Python, Java.

Tools: Linux, Git, Bash, Make, GDB, Valgrind, Quartus Prime, ModelSim, Vim, STM32 IDE.

Concepts: Embedded systems, Microcontrollers, Serial communication, FPGA design, Debugging.

Soft Skills: Communication, Motivation, Detail-oriented analytical thinking.
